	<p>The Puloon Cash Dispenser has 4x Cash Trays. They can be removed individually by pressing the green button & pulling the handle.</p>
	<p>Unlock and open the Puloon Cash Dispenser Cash Tray by unlocking the Lock using the Key Dae Ro / 02 provided.</p>

8.0 Instructions for Puloon Dispenser test software

Step 1:

Find and open UCDM V1.74 application

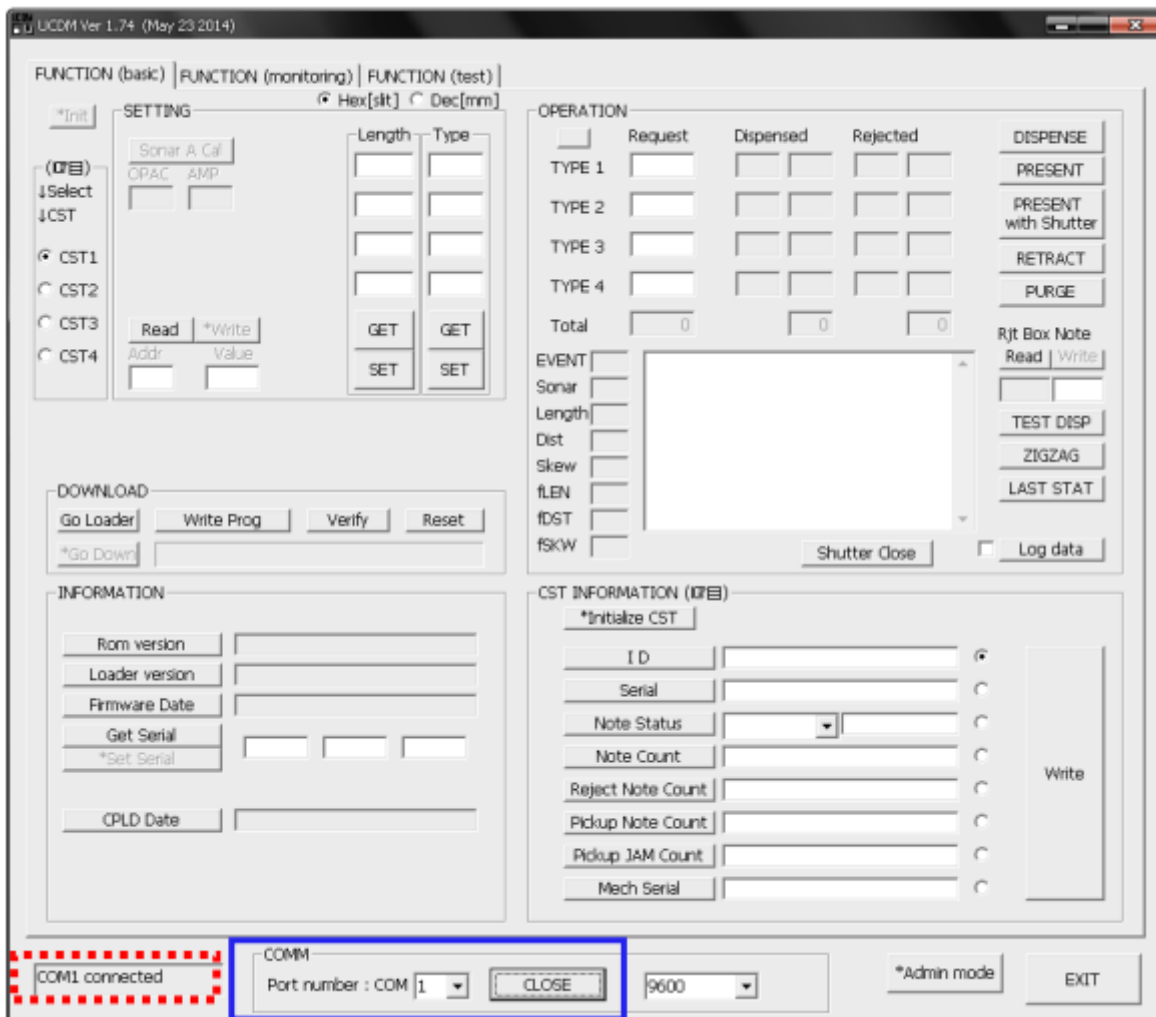

Step 2:

Using device manager determine the COM port the cash dispenser is connected to (1-10).

Step 3:

Select the communication port number and click the OPEN button to connect device. The OPEN button will be turned to CLOSE when it is connected normally with the display on the left side (like the red dotted box)

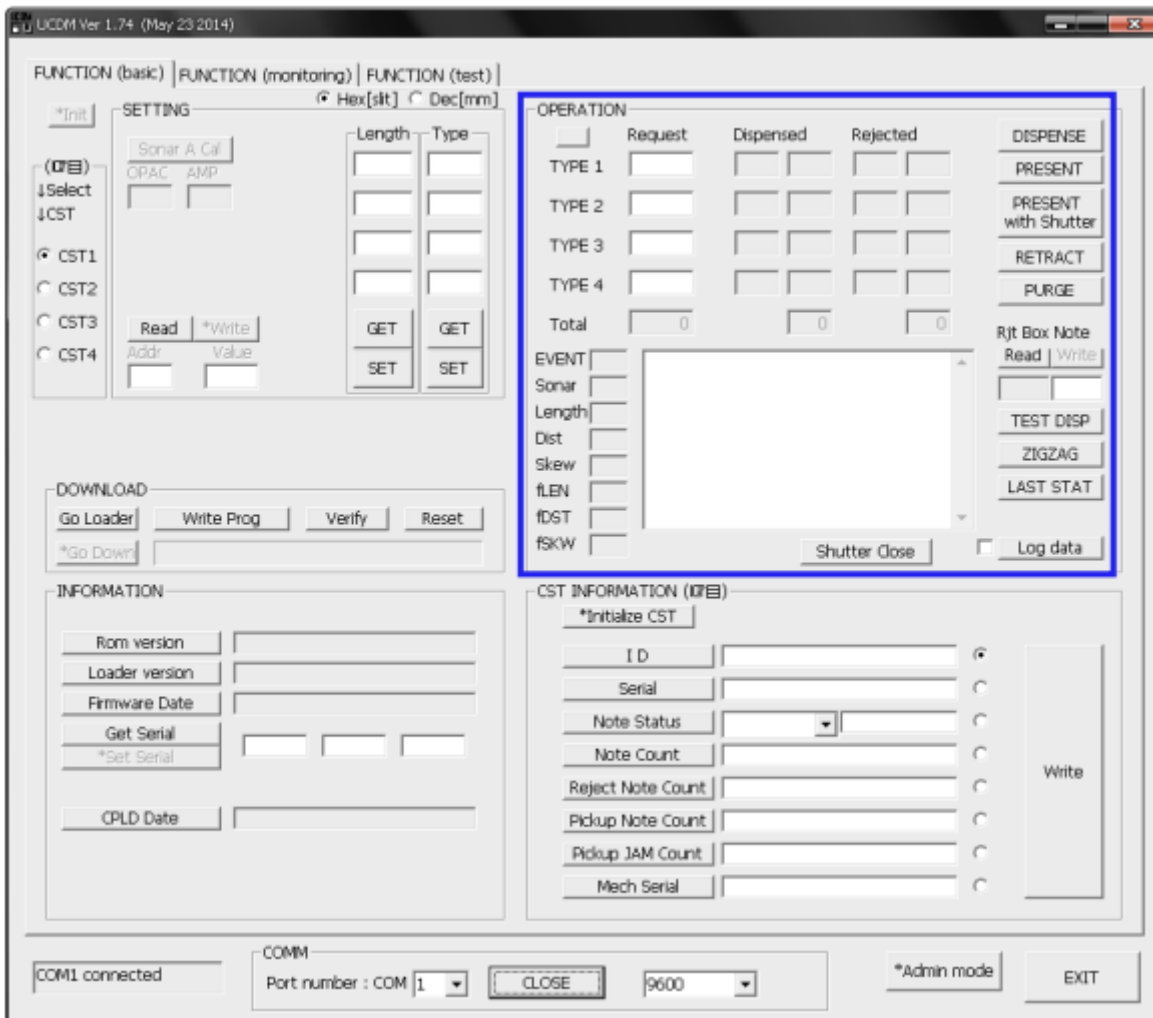

Without communication success, no function can work, and the red dotted box displays the communication status.

8.0 Instructions for Puloon Dispenser test software (continued)

Step 4:

Dispensing notes (Operation).

Input the requested amount for dispensing into the blanks on Request Type. Then **DISPENSE** is pressed and the requested quantity of note will be dispensed.

If an error is occurred, UCDM will stop, and the error codes will be displayed on the pop-up window.

The only commands that are necessary to know are:

Present- The dispensed notes by DISPENSE are stacked in the specific area before delivering to the customer. Then PRESENT enables to present the dispensed and stacked notes to the customer.

Retract- In case the customer does not take the presented banknotes within the designated time, RETRACT could be used for returning the notes back to Reject Cassette. Also, even after dispensing banknotes (before presenting), it enables all the stacked notes to be rejected to the Reject Cassette.

Purge- This command moves all notes on the path to the Reject Cassette and initializes UCDM with clearing all the errors.
